

BALLAST BROOM

SB 1

Due to its compact dimensions and the adjustable height of the rollers, the SB1 Ballast Broom can be used for any kind of track. The SB1 can be used on either concrete or wooden ties. In addition, the direction of the ballast conveyor belt can be switched from right to left from by the excavator operator.

Transport Dimensions

Width	2892mm / 114"
Height	1288mm / 51"
Length	2298mm / 90"

Technical Data

Weight	2400kg / 5291 lbs
--------	-------------------

ADVANTAGES

- Rapid Assembly
- Mounts easily on excavators
- Easy Handling
- Convenient Dimensions
- Ideal for small to medium sites
- Significant time savings

BALLAST BROOM

SB 1

OPERATIONS

The SB1 ballast broom is attached to the excavator boom with an adapter plate. After connecting the hydraulic lines, the SB1 can be moved along the track.

The adjustable side flaps make it possible to set the distance that the excess ballast is directed off the track.

Service doors incorporated on both sides of the SB1 make it possible to replace broom elements or to maintain the equipment.

The height of the SB1 can be adjusted from the excavator cab to obtain the desired results.
